

Log File Sensitive Data Exposure Assessment

VAPT — Log Review of Mobile / Web Application APIs

Client	TATA AIG CONsumer App
Target / Scope	Mobile & Web Application API logs
Assessed by	Fuzail Patel
Assessment date	10 Jun 2026
Files analysed	1
Log records scanned	10000
Total findings	8 issue type(s) / 51772 instance(s)

Critical	High	Medium	Low	Info
2	3	2	1	0

CONFIDENTIAL. This document contains the results of a security assessment and references to sensitive data discovered in log files. Sensitive values are masked. Distribute on a need-to-know basis only.

Index of Findings

Severity	Issue types	Total instances
Critical	2	10231
High	3	9950
Medium	2	1523
Low	1	30068
Info	0	0
TOTAL	8	51772

Findings

ID	Vulnerability	Severity	Instances
VAPT-LOG-001	JSON Web Token (JWT) / Auth Token in Logs	Critical	9756
VAPT-LOG-002	Payment Card Number (PAN) in Logs	Critical	475
VAPT-LOG-003	Bearer / Authorization Token in Logs	High	9756
VAPT-LOG-004	One-Time Password (OTP) in Logs	High	106
VAPT-LOG-005	Aadhaar Number (India National ID) in Logs	High	88
VAPT-LOG-006	Email Address (PII) in Logs	Medium	825
VAPT-LOG-007	Phone Number (PII) in Logs	Medium	698
VAPT-LOG-008	Internal/Client IP Address in Logs	Low	30068

Executive Summary

The log review identified **8** distinct type(s) of sensitive data being written to the application/API logs, across **51772** instance(s). Of these, **5** are rated High or Critical and represent an immediate risk of credential theft, session hijacking, payment fraud or privacy/regulatory breach (CWE-532). These should be remediated as a priority.

Logging sensitive data (credentials, tokens, OTPs, payment data, national IDs and other PII) violates CWE-532 and exposes that data to everyone with access to logs, SIEM pipelines, and backups. Logs are frequently retained far longer and shared more widely than the application's primary data store, which amplifies the breach impact.

Methodology. Each supplied log file was parsed into records and scanned with pattern-based detectors. Structural validators (Luhn for payment cards, the Verhoeff checksum for Aadhaar, PAN structure and IPv4 octet checks) were applied to reduce false positives. Every reported value is masked in this report and keyed to its source file, position and timestamp for verification.

Severity Classification

Severity	Meaning
Critical	Direct compromise / regulatory breach: secrets, payment data, full auth tokens.
High	National IDs, OTPs, session IDs, API tokens enabling impersonation or ID fraud.
Medium	PII such as phone, email, DOB, banking codes — privacy and correlation risk.
Low	Lower-sensitivity disclosure (e.g. IP addresses) useful for reconnaissance.
Info	Informational observations.

Detailed Findings

VAPT-LOG-001 — JSON Web Token (JWT) / Auth Token in Logs

CRITICAL

References	CWE-532, OWASP A09:2021, OWASP API2:2023 (Broken Authn)
Affected files	logs.xlsx
Occurrences	9756

Description / Evidence

The scanner detected this sensitive data type in the logs. Representative evidence (values masked), keyed by source file, position and timestamp:

... and 9731 more instance(s) not shown.

Impact

A JWT in logs can be replayed until expiry to fully impersonate the user/session. The token payload also commonly leaks PII (user id, email, roles).

Recommendation / Mitigation

Never log Authorization headers or tokens. Redact bearer tokens in request logging, shorten token lifetimes, and support server-side revocation.

VAPT-LOG-002 — Payment Card Number (PAN) in Logs

CRITICAL

References	CWE-532, PCI-DSS Req. 3.4, OWASP A09:2021
Affected files	logs.xlsx
Occurrences	475

Description / Evidence

The scanner detected this sensitive data type in the logs. Representative evidence (values masked), keyed by source file, position and timestamp:

... and 450 more instance(s) not shown.

Impact

Storing a Primary Account Number in logs is a direct PCI-DSS violation and enables payment fraud. Logs are typically retained and widely accessible, multiplying the breach exposure.

Recommendation / Mitigation

Never log full card numbers. If display is required, mask to the last 4 digits. Tokenize card data and keep it out of application logs entirely.

VAPT-LOG-003 — Bearer / Authorization Token in Logs

HIGH

References	CWE-532, OWASP A09:2021, OWASP API2:2023
Affected files	logs.xlsx

... and 81 more instance(s) not shown.

Impact

OTPs in logs defeat two-factor authentication. An insider or attacker reading logs in near-real-time can complete logins or transactions on behalf of the user.

Recommendation / Mitigation

Never log OTP values. Log only an opaque event ('OTP sent') with no code, keep OTP lifetimes short, and invalidate on use.

VAPT-LOG-005 — Aadhaar Number (India National ID) in Logs

... and 63 more instance(s) not shown.

Impact

Aadhaar is a sensitive national identifier. Its exposure in logs breaches the DPDP Act and the Aadhaar Act, enables identity theft and KYC fraud, and carries regulatory penalties.

Recommendation / Mitigation

Do not log Aadhaar. Where reference is unavoidable, store only a masked form (last 4 digits) or a one-way reference token, and encrypt at rest.

VAPT-LOG-006 — Email Address (PII) in Logs

MEDIUM

References CWE-532, CWE-359, OWASP A09:2021

Affected files logs.xlsx

Occurrences 825

Description / Evidence

The scanner detected this sensitive data type in the logs. Representative evidence (values masked), keyed by source file, position and timestamp:

25	logs.xlsx	Sheet1!row 367	2026-05-12 18:18:08.645	rumanakhan2929@gmail.com

... and 800 more instance(s) not shown.

Impact

Email addresses are personal data useful for phishing and account correlation. Mass exposure via logs increases breach impact and regulatory exposure.

Recommendation / Mitigation

Minimise logging of email addresses; use internal user IDs instead. If logged, mask the local part and enforce retention limits.

VAPT-LOG-007 — Phone Number (PII) in Logs

MEDIUM

References CWE-532, CWE-359, India DPDP Act 2023

... and 673 more instance(s) not shown.

Impact

Phone numbers are personal data. In logs they enable user tracking, correlation across systems, SIM-swap / smishing targeting and breach the data-minimisation principle.

Recommendation / Mitigation

Avoid logging full phone numbers. Mask to the last 2-4 digits where a reference is needed, and apply log retention limits.

VAPT-LOG-008 — Internal/Client IP Address in Logs

LOW

References CWE-532, CWE-359 (IP can be PII under GDPR/DPDP)

Affected files logs.xlsx

Occurrences 30068

Description / Evidence

The scanner detected this sensitive data type in the logs. Representative evidence (values masked), keyed by source file, position and timestamp:

#	File	Location	Timestamp (primary key)	Evidence (masked)
1	logs.xlsx	Sheet1!row 2	2026-05-12 18:29:37.461	10.112.14.173

... and 30043 more instance(s) not shown.

Impact

IP addresses can be personal data and may reveal internal network topology. Useful to an attacker for reconnaissance and user geolocation/correlation.

Recommendation / Mitigation

Treat IPs as personal data: limit retention, restrict access, and consider truncating the last octet for analytics use cases.

Appendix A — Detector Coverage

Code	Detects	Severity
PRIVATE_KEY	Private Cryptographic Key Disclosed in Logs	Critical
PASSWORD	Plaintext Password / Credential in Logs	Critical
CARD_PAN	Payment Card Number (PAN) in Logs	Critical
CVV	Card Verification Value (CVV/CVC) in Logs	Critical
AWS_KEY	Cloud Access Key (AWS) in Logs	Critical
JWT	JSON Web Token (JWT) / Auth Token in Logs	Critical
BEARER	Bearer / Authorization Token in Logs	High
AADHAAR	Aadhaar Number (India National ID) in Logs	High
PAN_INDIA	PAN (India Permanent Account Number) in Logs	High
OTP	One-Time Password (OTP) in Logs	High
BANK_ACCOUNT	Bank Account Number in Logs	High
SESSION_ID	Session Identifier in Logs	High
PHONE_IN	Phone Number (PII) in Logs	Medium
EMAIL	Email Address (PII) in Logs	Medium
IFSC	IFSC Bank Code in Logs	Medium
DOB	Date of Birth (PII) in Logs	Medium
IPV4	Internal/Client IP Address in Logs	Low

Appendix B — Scope & Disclaimer

This assessment is a point-in-time, pattern-based review of the log samples supplied by the client. Absence of a finding is not proof of absence of sensitive data: detection is limited to the configured patterns and the data provided. Pattern matching can yield false positives and false negatives; all findings should be validated against source data before remediation sign-off. Sensitive values shown in this report are masked.

Report generated by LogScan on 10 Jun 2026 17:32.
